FOREWORD

Norton & Brooksbank are delighted to once again receive instructions from Oliver Melling & family to disperse their herd of Holsteins and Pro-Cross cattle, having had a long established trading relationship over many decades including previous sales for their 'Ribble' herd of Holsteins.

The Ribble herd was founded in the 1940's by Oliver's father, John and came to prominence during the 1980's with the importation of numerous high profile Canadian Holsteins together with a successful sale held on the farm in 1983.

Over recent years, the emphasis on breeding registered Holsteins has shifted towards more commercially managed cattle with the introduction of cross breeding with both Montbeliarde & Fleckvieh as well as Norwegian Red to produce a lower input, easier care cow capable of profit from forage and grazing.

Oliver & Helen together with their sons John & James have decided to cease milk production and change farming policy. Their eldest son John wishes to pursue an alternative career, whilst James is still in recovery from Covid related illness. Their decision brings about this most interesting and genuine dispersal sale.

Oliver & Helen would like to take this opportunity to thank all their friends, neighbours, employees and particularly Stanley Wood, their herdsman, for all their help, over 40 years, to milk cows.

Management

Cows are calved all year round (although many are fresh at sale time), milked twice daily, winter housed in cubicles and fed simple TMR of grass and home produced cereal.

All cows are extensively grazed for as long as weather allows with the herd set stocked over permanent pasture for 6-7 months of the year. Current milk yields of 8100kg 4.28 fat 3.3 protein bear testimony to the capabilities of these cattle on this simple system. Fertility is of particular note with the herd regularly achieving 40% conception rate.

August 2022

I have had the privilege to be the principal attending veterinary surgeon for Grange Farm for the past seven years. Throughout this time, a strong emphasis has been placed on breeding for both production and longevity.

The herd is vaccinated for BVD and have been tag and testing for 2 years.

The herd is vaccinated for IBR and I have seen no clinical cases in the past seven years since I have been attending.

The cows have been individually milk tested for Johne's disease every quarter for the past 5 years with results showing that levels are low; there are currently no 'red' cows in the herd.

The herd has the advantage of being in a low risk area for TB and is on 4 yearly testing; the last TB test was in November 2020 and was completely clear.

Whilst I am sorry to see this herd dispersed, I am confident that these cows will benefit many other farms and are a credit to the Melling family.
